Wheelabrator Pre-Blast Cleaning

Wheelabrator® In-Line Pre-Blast Systems clean castings with gating and sprue intact, lowering cooling time and reducing airborne silica levels at the degating / despruing and sorting operations. Plant cleanliness is also improved by capturing the sand in one location before the castings are conveyed to multiple batch or continuous machines for final cleaning. Wheelabrator Pre-Blast Systems include Vibra-Tunnel machines and continuous Rocker Barrels.

All Wheelabrator Pre-Blast machines are equipped with EZEFIT™ blast wheels for faster cleaning cycles and superior durability.

Wheelabrator Pre-Blast Systems are ideal for use in foundries for sand removal.

Users include:

- Automotive
- Iron Foundries
- Brass Foundries
